- 11** 11. Seminars & deliveries
- 12** Admin tips & gotchas

Complete reference for administrators. Admins have full access to every module, person, report, and setting.

1. Dashboard

The admin Program health dashboard

The admin Program health dashboard

Dashboard is your live program overview. **Everything is clickable** to drill in:

- **KPI cards** (click to drill down): **Total employees** → People, **Pass rate** → Test results (passed), **Average score** → Test results, **At-risk** → At-risk list. Each shows a trend delta.
- **Module-by-module performance** — a stacked bar chart (passed/failed per module). **Click a bar** to open that module's attempts.
- **Employee status** — donut of Active / Completed / At-risk / Inactive.
- **Cohorts/markets** — per market: totals, completed, at-risk, active, with progress bars.
- **Activity feed** — the 8 latest events (View all → Audit log).
- **At-risk panel** — the most at-risk employees; click to open a person, or "All" → At-risk.

2. Modules

Modules list

All modules

All modules

Modules shows all modules (List or Card view, toggle persists). **Search** by number/title/description/month/owner. Click a module to open it. **Add module** opens the wizard.

Add module (4-step wizard)

1. **Details & content** — module number (auto), **title**, **description**, **scheduled date** + optional **time**, **owner** **Department Lead(s)**, **pass threshold** (default 85%), **question count** (default 25), optional **time limit**, and optional **required resources** to link. Below, the **Lessons builder** (add lessons + content — see §3).
2. **Generate questions** — AI drafts questions one at a time; **Add** the good ones, **Skip** the rest. Toggle the **pool** (First attempt / Retake) as you go.
3. **Choose employees** — pick who attends (defaults to everyone due). Leave empty to schedule later.
4. **Publish & send** — **Publish** (creates the module, links resources, schedules the seminar if you picked people, and emails invites in batches) **or Save as draft** (stays admin-visible, hidden from employees, publish later).

Module detail page

Header has **Edit module** and **Open presenter**. A **Module setup panel** guides you: 1) Add content, 2) Generate & approve questions, 3) Choose employees & schedule, 4) **Publish / Unpublish**.

Tabs:

- **Overview** — KPIs (Attempts/Pass rate/Avg score/Failed, all clickable), the seminar plan + lessons, quick links (Question bank, Results, All attempts), and a sidebar: **Required resources** (link/unlink), **Module owners**, **Schedule** (day, length, pass threshold, quiz length), **Content tally**.
- **Content** — read-only lessons preview + **Edit content**.
- **Questions** — bank summary grouped by pool + **Review & edit questions**.

- **Roster** — who's expected for the current delivery; **Reschedule** / **Schedule redelivery**; the roster table (bulk add/remove, search/filter).
- **Past deliveries** — timeline of prior deliveries with attendance + session times.
- **Reports** — attempts table for this module + **Open full Test Results**.

Edit module

Same fields as the wizard, pre-filled (number can't change). Edit details, owners, thresholds, lessons, and linked resources; **Save changes**.

Publish vs Draft

Only **published** modules appear to employees. **Draft** modules are visible to admins/leads but hidden from employees. Use **Unpublish** to pull a module back to draft. Publishing with fewer approved questions than the quiz length asks for a confirmation but is allowed.

3. Lessons & content builder

- **Add lesson** (title, description, duration). Reorder lessons with the arrows; delete with the trash.
- **+ Add content** → **Video** / **Document** / **Slides** / **Link**. Upload (video ≤ 2 GB, document/slides ≤ 50 MB) or paste a URL.
- Per item: **Edit** (title/duration/URL), **reorder**, **delete**, and the **eye toggle** / **"Don't show on presentation day"** (hides from the live presenter, keeps it as employee pre-study).
- **Version history** records every save with **who edited** + when, and lets you **restore**.

4. Question library

The question library across all modules

The question library across all modules

Question library spans all modules (a Department Lead sees only their own). Filter by **module**, **pool** (First attempt / Retake), **status** (Approved / Pending), and **search**. Paginated.

Per question you can **Approve**, **Edit**, **Regenerate with AI**, set **pool**, **Duplicate** → **retake**, view **Who answered** (who got it right/wrong, with date/time — searchable + paginated), view **History** (and restore), or **Reject**. Each shows **Attempts** and **Pass rate** (shows "—" with 0 attempts) and **Approved by**. **Generate with AI** drafts a fresh bank from the module's content.

5. Resources

The Resources admin, organised into department folders

The Resources admin, organised into department folders

Resources holds policies, SOPs, guides — anything non-quiz. Resources are organised into **department folders** (collapsible).

Create / edit a resource

Fields: **Title**, **Department** (folder), **Category** (tag), **Description**, content as a **markdown body** OR an **uploaded file** OR an **external link**, **Audience** (Employees / Department Leads / Admins), **Markets** (empty = all), **Requires acknowledgement** toggle, and **Require re-acknowledgement on next update** (bumps the version so everyone must sign again and gets notified), and **Notify on update**.

Resource detail page

A resource's detail page — preview, change history, acknowledgements

A resource's detail page — preview, change history, acknowledgements

Click a resource (or **View all details**) to open its page:

- **Preview** — renders the document/markdown/link.
- **Change history** — every edit: version, **who edited**, date/time, and **what changed** (a field-level diff). This is the audit trail.
- **Acknowledgements** — the current-version status (**X of Y acknowledged**, who's pending, with date/time) and a per-version **acknowledgement tree** showing who signed each version and when (re-acknowledgements branch as new version nodes). Both lists are paginated.
- **Edit / Delete** from the header.

"Acknowledgement required" forces a read-and-understand sign-off. If a module links a resource as required, employees must sign it before that module's **quiz** unlocks.

6. People

Employees (People → Employees)

The Employees directory

The Employees directory

A table of all employees: name, **markets**, **status** (Pending / Active / At-risk / Completed / Inactive), joined, last active. **Search** by name/email; **filter** by market and status. **Select rows** for bulk actions (**Send reminder** with a preview, **Remove**, **Resend invite**). Per person: open their detail, send a reminder, deactivate/reactivate, force password reset, delete.

- **Add employee** — name, email, market(s); sends an invite email.
- **Bulk import** — upload a CSV (`name,email,markets` ; markets separated by `;`). Rows are validated; import the valid ones; invites send in batches.

Employee detail

A person's profile, their assigned modules (status, attempts, pass rate), and **all their attempts** (click into any). Actions: send reminder, reschedule a retake, force password reset, deactivate, delete.

Department Leads (People → Department Leads)

A table of leads: owned modules, question-bank progress, joined, last active. **Invite Department Lead** (name, email, title). Email / send reminder / delete per lead.

Admins (People → Admins)

A table of admins (name, title, joined, last active). **Invite admin** (name, email, title). A note reminds you admins have full access — grant carefully.

At-risk

At-risk lists auto-flagged employees (cards, paginated). A person is flagged when any of these is true: **failed twice on a module**, **missed a deadline**, **hasn't logged in 14+ days**, **first attempt below 70%**, or **no attempt on an assigned module**. Flags clear automatically when they pass a retake or log back in. **Send reminder** (with email preview) per person, or **Send reminder to all**. The **"What is at-risk?"** button explains the rules.

7. Reports & test results

Test results — the master attempts table

Test results — the master attempts table

Test results is the master attempts table:

- KPIs: total attempts, pass rate, average score, failed.
- Columns: employee, module, pool, **score**, status, **Attended** (checked-in vs not), date **with time**. Sort, filter (by module/pool/status), search by employee. Paginated. **Download CSV** exports the current view.
- Click a row to open the **attempt detail**: the score, correct/wrong counts, time taken, and a **question-by-question review** with the correct answers and the employee's choices. Actions: send reminder, schedule retake.

Per-module **Reports** (from the module page) add a score-distribution chart, most-missed questions, and the **roster — who attended & how they did**.

8. Audit log

The audit log — filterable, sortable event history

The audit log — filterable, sortable event history

Audit log records every event (sign-ins, quiz pass/fail, module published, reminders, resource changes, sessions, etc.). **Search** the message, **filter by event type**, **filter by person**, and **sort** newest/oldest. **Clear** resets filters. Paginated. The log is append-only.

9. Notifications & email templates

Email templates & reminder rules

Email templates & reminder rules

Notifications :

- **Email templates** — edit the subject + markdown body of each automated email (invitation, password reset, welcome, quiz passed, quiz failed/retake, overdue reminder, at-risk alert, sign-in code, seminar scheduled/rescheduled). Insert **{{variables}}** like **{{name}}**, **{{module}}**, **{{score}}**, **{{date}}**, **{{link}}**. **Preview** the rendered email and **Send test** to yourself.
- **Reminder rules** — toggle **auto-reminders** and set the **overdue threshold** (days).

Anywhere you send a reminder (At-risk, People, a person's page), you first see an **email preview** and confirm before it sends.

10. Settings

Branding (Settings → Branding)

Branding settings

Branding settings

- **Platform name** (shown by the sidebar logo).
- **Brand colours** — primary (navy) + accent (teal), with a live preview.

- **Logo** — upload SVG/PNG/JPG/WebP.
- **Email sender** — the From address for all automated emails (must be on your verified sending domain).

Certificate (Settings → Certificate)

The certificate editor with live preview

The certificate editor with live preview

Fully customise the completion certificate with a **live preview**:

- **Heading, intro line, completion line, footer.**
- **Organisation name**, optional **signatory name + title**.
- **Show logo** toggle (uses the branding logo).
- Placeholders `{{name}}`, `{{module}}`, `{{score}}`, `{{date}}` fill in per employee. Saved settings apply to every employee's certificate.

11. Seminars & deliveries

- **Schedule a seminar / redelivery** — pick a **date + time** and the attendees (defaults to everyone due); invites email in batches. A module can have **multiple deliveries** (1st, 2nd, ...); each attempt is tied to the delivery it happened in. **Rescheduling** the current delivery moves only that one; **scheduling a new delivery** creates the next one and archives the prior in **Past deliveries**.
- **Check-in** — opened by the Department Lead in the presenter; each session has a **fresh 4-digit code**. Attendance is recorded and shown on rosters and the attempted-vs-not column in reports.
- **Send the quiz to non-attendees** — quizzes open after the seminar; you can also send/open the quiz to selected people who didn't attend (talk to your team about policy).

Admin tips & gotchas

- A module **must have an owner** (a Department Lead) and **published** status before employees see it.
- The AI reads content **after it's uploaded** — upload first, then generate questions.
- **Rejecting** a question is final; regenerate to get a new one. **Duplicate** → **retake** makes a reworded retake copy.
- Editing a resource with **re-acknowledgement** on **bumps its version** and asks everyone to sign again; the resource detail page shows the full history.
- **At-risk** flags are automatic (you can't set them by hand) and clear on their own.
- **Demo mode** (if enabled) shows "(demo)" toasts and doesn't send real emails.

See the FAQ for quick answers.
