 - 8** 8. My team
 - 9** 9. Taking a module yourself & My Progress
 - 10** 10. What you can't do (Admin-only)
-

For the trainer who owns a module: build it, present it live, review questions, and see how your people did.

A Department Lead now **sees every module** - but only **edits** the ones they **own** (ownership is assigned by an Admin). On a module you don't own you can still **present it**, **take the quiz yourself**, and **view results**; the editing controls are simply hidden.

1. Your dashboard

The screenshot displays the Department Lead dashboard. On the left is a sidebar with the BCJ logo and navigation links: Dashboard, My Modules, Resources, Reporting, My team, My Progress, and Help. The main area features a search bar at the top. Below it, a 'WELCOME, TEST' message is followed by the heading 'Your modules at a glance' and a subtext 'Approve AI-drafted questions, watch results roll in, and refine for the next cohort.' Four KPI cards are shown: 'MY MODULES' with a value of 1, 'QUESTIONS APPROVED' with 3, 'PENDING REVIEW' with 56, and 'QUIZ ATTEMPTS' with 0. Each card has a small icon. Below these is a 'Modules you own' section. It shows a module 'M2' dated 'Jun 27, 2026' with a 'Draft' status. The module name 'Test' is displayed, along with the email 'test-manager@bcjbuildingservices.com'. A 'Question bank' progress bar shows '3 / 59'. Below the bar are three boxes: 'PASS RATE' with a minus sign, 'ATTEMPTS' with 0, and 'TRAINING DAY' with 'Jun 27'. At the bottom of this section are four buttons: 'Present in seminar' (with a megaphone icon), 'Edit content' (with a pencil icon), 'Questions' (with a list icon), and 'See results' (with a bar chart icon). The bottom of the dashboard shows a user profile icon and the text 'You're viewing as teacher'.

The Department Lead dashboard

Dashboard shows your training at a glance:

- KPIs: **My modules**, **Questions approved**, **Pending review**, **Quiz attempts**.
- **Modules you own** - a card per module with its question-bank progress (e.g. "12/20 approved", an "AI ready" badge if questions are waiting), pass rate, attempts, training day, and quick buttons: **Present in seminar**, **Content**, **Questions**, **See results**.

2. My Modules

The screenshot displays the 'My Modules' page in the BCJ Learn system. On the left, a sidebar contains navigation options: Dashboard, My Modules (active), Resources, Reporting, My Progress (highlighted with a red box and a callout 'Take a quiz yourself — your results live here'), and Help. The main area is titled 'Modules' and features a search bar, a '+ Add module' button, and a list of modules. Two modules are shown: 'M2' (Draft) and 'M1' (Published). Each module card includes details like duration, status, and actions such as 'Present in seminar', 'Take it yourself', 'Content', 'Questions', and 'See results'.

Your modules

My Modules lists **every** module. The ones you **own** carry the full edit controls (content, questions, schedule); on the rest you can **present**, **take it yourself**, or **see results**. **Add module** creates a new one with you as the owner. Each card has the same quick actions as the dashboard.

Module detail

Opening a module shows: question bank progress, attempts, pass rate, the **seminar plan** (lessons + total time), a **content tally** (videos/documents/slides/links), the **current roster** (who's expected, with live status), **past deliveries**, and buttons to **review questions** and **see results**.

3. Building the content

The lessons & content builder

Open **Content** (the lessons builder):

- **Add lesson** - give it a title, description, and duration.
- **Add content** to a lesson - choose **Video**, **Document**, **Slides**, or **Link**. Upload a file (videos up to 2 GB; documents/slides up to 50 MB) or paste a URL.
- **Edit** a content item (title, duration, URL) with the pencil; **reorder** with the up/down arrows; **delete** with the trash.
- **"Don't show on presentation day"** - toggle the eye on any item to hide it from the live presenter (it still stays available to employees as pre-study).
- **Save changes** - an "Unsaved changes" bar appears while you have edits; save to keep them.
- **Version history** - every save is snapshotted. Open **Version history** to see each version with **who edited it** and when, and **Restore** an earlier one (the current content is snapshotted first, so it's reversible).

Once content is uploaded, the AI can read your videos/documents and use them to draft quiz questions.

4. Generating & reviewing questions

Reviewing the AI-drafted question bank

Open Questions:

- **Generate questions with AI** - the AI reads your content and drafts a question bank (first-attempt + retake pools). Review them.
- The bank shows progress: **X approved · Y%**, with counts of Pending / Approved / Edited / Rejected.
- **Filter** by pool (**All / First attempt / Retake**) and status (**Any / Pending / Approved**), and **search** by text. The list is paginated.
- Pick a question from the queue to review it on the right. For each question you can:
 - **Approve** - it goes live.
 - **Edit** - fix the wording/options/correct answer/explanation.
 - **Regenerate with AI** - get a fresh AI draft of that question.
 - **First attempt / Retake** toggle - classify which pool it belongs to.
 - **Duplicate → retake** - create a reworded copy in the retake pool (AI rewords the same concept).
 - **Who answered** - see exactly who has answered this question, right or wrong, with date & time (searchable + paginated).
 - **History** - view past versions of the question and **restore** one.
 - **Reject** - discard it.
- **"Attempts"** and **"Pass rate"** per question tell you how it's performing once people start answering (shows "-" until there are attempts). **"Approved by"** shows who approved it.
- **Publish (X/Y)** - publishes the module so employees can take it. You can also save a module as a **draft** and publish later.

5. Presenting the seminar

The check-in lobby - employees enter the 4-digit code

On training day, open **Present in seminar** (full-screen presenter):

1. **Check-in lobby** - you see the roster. **Open check-in:** a **4-digit code** appears for employees to enter on their devices. **Start the session** when you're ready.
2. **Presentation mode** - your content plays as a playlist. Each item shows **exactly the file you uploaded** - PDFs, PowerPoint, Word and video render as-is on the big screen (Office files open through Microsoft's online viewer, so the room needs internet for those).
 - The top bar shows the current lesson, an elapsed timer vs. planned minutes, and a progress bar.
 - Navigate with the on-screen **Previous/Next**, or keyboard: → / **Page Down** next, ← / **Page Up** previous, **Space** play/pause, **F** fullscreen, **Esc** to close the outline.
 - Open the **Outline** to jump to any lesson/content item; viewed items get a check.
3. **End the session** - on the last item, tap **End session**. This **opens the quiz** to everyone who checked in ("Session ended - quiz is now open to the room"). You're taken to the results page.

6. Check-in & scheduling

- **Check-in** is opened from the presenter (above). Each session has a **fresh code**.
- **Schedule / reschedule the seminar** with **date and time** from the module's roster section (or the admin sets it up). When you schedule, the attendee list comes **pre-checked with everyone who hasn't passed in the last 12 months** (new hires, past fails, recertification-due) - and you can **search the full employee directory to add anyone else**, or uncheck people you don't want. The selected people are invited and emailed. Rescheduling keeps the same attendees and emails them the new date/time.

7. Results

Module results - pass rate, distribution, roster

Open **See results** for a module:

- KPIs: **Attempts**, **Pass rate**, **Avg score**, **Failed**.
- **Score distribution** chart and **most-missed questions** (top 5 by miss rate) - tells you what to re-teach.
- **Roster - who attended & how they did** - every attendee with their check-in/attempt status; an **Attended** indicator and date/time on attempts.
- **Recent attempts** table (submitted attempts only), with first-attempt vs retake, score, and pass/fail.

8. My team

My team

Managers being trained on the module you own (M2). Read-only — Admin manages user records.

TEAM MEMBERS 16

PASSED YOUR MODULES 0

NOT YET ATTEMPTED 16

AT-RISK 2

Search by name, email, cohort... **Cohort** 16 of 16

You are viewing as teacher

My team - employees trained on your modules

My team lists the employees on the modules you **own** - anyone **invited to** (or who has **taken**) one of your modules. People outside your modules don't appear, and if you don't own a module yet your team is empty.

- KPIs: team members, passed your modules, not yet attempted, at-risk.
- **Search** by name/email/market and **filter by market**.
- Each row shows their status in your modules, best score, attempts, overall status, and last active. You can **send a reminder** (with an email preview) or view a person's detail.

9. Taking a module yourself & My Progress

You can take any module's quiz to experience it from the employee's side - open the module and tap **Take it yourself**. Your own attempts, scores, **answer review**, and **certificates** live under **My Progress** in your sidebar - the same history employees get. Handy for sanity-checking a quiz before a seminar, or for completing training that applies to you too. (You bypass the invite gate, so you can take any module.)

What you can't do (Admin-only)

Department Leads can **see** every module but **don't edit** modules they don't own. They also don't manage the employee directory at large, branding/certificate/email settings, the audit log, bulk user import, or CSV exports. Ask an Admin for those.

See the *FAQ* for quick answers.
