- 11** 11. Seminars & deliveries
- 12** Admin tips & gotchas

Complete reference for administrators. Admins have full access to every module, person, report, and setting.

## 1. Dashboard

The admin Program health dashboard

**Dashboard** is your live program overview. **Everything is clickable** to drill in:

- **KPI cards** (click to drill down): **Total employees** → People, **Pass rate** → Test results (passed), **Average score** → Test results, **At-risk** → At-risk list. Each shows a trend delta.
- **Module-by-module performance** — a stacked bar chart (passed/failed per module). **Click a bar** to open that module's attempts.
- **Employee status** — donut of Active / Completed / At-risk / Inactive.
- **Cohorts/markets** — per market: totals, completed, at-risk, active, with progress bars.
- **Activity feed** — the 8 latest events (View all → Audit log).
- **At-risk panel** — the most at-risk employees; click to open a person, or "All" → At-risk.

## 2. Modules

### Modules list

The screenshot displays the 'All modules' page in the BCJ Learn system. The page is titled 'CURRICULUM' and 'All modules'. Below the title, it says 'The Employee training program. Click any to see results, content, and attempts.' There is a search bar for modules by title, owner, or month. The main content area lists three modules:

| Module ID | Owner                                 | Status    | Date      | Day    | Attempts | Pass Rate | Owned by  |
|-----------|---------------------------------------|-----------|-----------|--------|----------|-----------|-----------|
| M1        | HR                                    | Published | June 2026 | Jun 18 | 0        | —         | Test Lead |
| M2        | Test                                  | Archived  | June 2026 | Jun 2  | 1        | 0%        | Test Lead |
| M3        | Module Ops - Test Module for Training | Published | June 2026 | Jun 2  | 3        | 0%        | Test Lead |

The sidebar on the left includes links to Dashboard, People, Content, Modules (selected), Resources, Question library, Reporting, Operations, and Help. The top right corner has a search bar, a notification bell, and a user profile icon labeled 'TA'. The bottom left corner shows the user is viewing as 'admin'.

All modules

**Modules** shows all modules (List or Card view, toggle persists). Each row shows its **Published / Draft** status and, once the module has been delivered (its seminar's session has ended), a green "**Delivered {date}**" badge. **Search** by number/title/description/month/owner. Click a module to open it. **Add module** opens the wizard.

### Add module (4-step wizard)

- Details & content** — module number (auto), **title**, **description**, **scheduled date** + optional **time**, **owner Department Lead(s)**, **pass threshold** (default 85%), **question count** (default 25), optional **time limit**, and optional **required resources** to link. Below, the **Lessons builder** (add lessons + content — see §3).
- Generate questions** — AI drafts questions one at a time; **Add** the good ones, **Skip** the rest. Toggle the **pool** (First attempt / Retake) as you go.
- Choose employees** — pick who attends. Everyone who hasn't passed in the last 12 months is **pre-checked**, and you can **search the full directory to add anyone else** (already-passed people show a "passed" hint and start unchecked). Leave empty to schedule later.
- Publish & send** — **Publish** (creates the module, links resources, schedules the seminar if you picked people, and emails invites in batches) **or Save as draft** (stays admin-visible, hidden from employees, publish later).

### Module detail page

Header has **Edit module** and **Open presenter**. A **Module setup panel** guides you: 1) Add content, 2) Generate & approve questions, 3) Choose employees & schedule, 4) **Publish / Unpublish**.

Tabs:

- Overview** — KPIs (Attempts/Pass rate/Avg score/Failed, all clickable), the seminar plan + lessons, quick links (Question bank, Results, All attempts), and a sidebar: **Required resources** (link/unlink), **Module owners**, **Schedule** (day, length, pass threshold, quiz length), **Content tally**.

- **Content** — read-only lessons preview + **Edit content**.
- **Questions** — bank summary grouped by pool + **Review & edit questions**.
- **Roster** — who's expected for the current delivery; **Reschedule** / **Schedule redelivery**; the roster table (bulk add/remove, search/filter).
- **Past deliveries** — timeline of every delivery with attendance + session times. The current delivery is tagged **Active** (not yet presented), **Delivered {date}** (its seminar has ended but it stays open so people can retake), or **Archived** (superseded by a newer delivery).
- **Reports** — attempts table for this module + **Open full Test Results**.

### Edit module

Same fields as the wizard, pre-filled (number can't change). Edit details, owners, thresholds, lessons, and linked resources; **Save changes**.

### Publish vs Draft

A module appears to an employee only when it's **published AND they've been invited** to it (added to its roster) — publishing alone does **not** expose it to the whole company. **Draft** modules are visible to admins/leads but hidden from employees. Use **Unpublish** to pull a module back to draft. Publishing with fewer approved questions than the quiz length asks for a confirmation but is allowed.

---

## 3. Lessons & content builder

---

- **Add lesson** (title, description, duration). Reorder lessons with the arrows; delete with the trash.
  - **+ Add content** → **Video / Document / Slides / Link**. Upload (video ≤ 2 GB, document/slides ≤ 50 MB) or paste a URL.
  - Per item: **Edit** (title/duration/URL), **reorder**, **delete**, and the **eye toggle** / **"Don't show on presentation day"** (hides from the live presenter, keeps it as employee pre-study).
  - **Version history** records every save with **who edited** + when, and lets you **restore**.
-

## 4. Question library

The question library across all modules

**Question library** spans all modules (a Department Lead sees only their own). Filter by **module**, **pool** (First attempt / Retake), **status** (Approved / Pending), and **search**. Paginated.

Per question you can **Approve**, **Edit**, **Regenerate with AI**, set **pool**, **Duplicate** → **retake**, view **Who answered** (who got it right/wrong, with date/time — searchable + paginated), view **History** (and restore), or **Reject**. Each shows **Attempts** and **Pass rate** (shows "—" with 0 attempts) and **Approved by**. **Generate with AI** drafts a fresh bank from the module's content.

## 5. Resources

The Resources admin, organised into department folders

**Resources** holds policies, SOPs, guides — anything non-quiz. Resources are organised into **department folders** (collapsible).

### Create / edit a resource

Fields: **Title**, **Department** (folder), **Category** (tag), **Description**, content as a **markdown body** OR an **uploaded file** OR an **external link**, **Audience** (Employees / Department Leads / Admins), **Markets** (empty = all), **Requires acknowledgement** toggle, and **Require re-acknowledgement on next update** (bumps the version so everyone must sign again and gets notified), and **Notify on update**.

## Resource detail page

A resource's detail page — preview, change history, acknowledgements

Click a resource (or **View all details**) to open its page:

- **Preview** — renders the document/markdown/link.
- **Change history** — every edit: version, **who edited**, date/time, and **what changed** (a field-level diff). This is the audit trail.
- **Acknowledgements** — the current-version status (**X of Y acknowledged**, who's pending, with date/time) and a per-version **acknowledgement tree** showing who signed each version and when (re-acknowledgements branch as new version nodes). Both lists are paginated.
- **Edit / Delete** from the header.

"Acknowledgement required" forces a read-and-understand sign-off. If a module links a resource as required, employees must sign it before that module's **quiz** unlocks.

## 6. People

### Employees ( People → Employees )

Viewing as admin

The Employees directory

A table of all employees: name, **markets**, **status** (Pending / Active / At-risk / Completed / Inactive), joined, last active. **Search** by name/email; **filter** by market and status. **Select rows** for bulk actions (**Send reminder** with a preview, **Remove**, **Resend invite**). Per person: open their detail, send a reminder, deactivate/reactivate, force password reset, delete.

- **Add employee** — name, email, market(s); sends an invite email.
- **Bulk import** — upload a CSV ( `name,email,markets` ; markets separated by `;` ). Rows are validated; import the valid ones; invites send in batches.

#### Employee detail

A person's profile, their assigned modules (status, attempts, pass rate), and **all their attempts** (click into any). Actions: send reminder, reschedule a retake, force password reset, deactivate, delete. **Editing a person lets you change their role** (Employee ↔ Department Lead ↔ Admin) — demoting a lead removes their module ownership — and for a still-**pending** invite you can **Resend invite**.

### Department Leads ( People → Department Leads )

A table of leads: owned modules, question-bank progress, joined, last active. **Invite Department Lead** (name, email, title). Email / send reminder / delete per lead.

### Admins ( People → Admins )

A table of admins (name, title, joined, last active). **Invite admin** (name, email, title). A note reminds you admins have full access — grant carefully.

At-risk

**At-risk** lists auto-flagged employees (cards, paginated). A person is flagged when any of these is true: **failed twice on a module, missed a deadline, hasn't logged in 14+ days, first attempt below 70%, or no attempt on an assigned module**. Flags clear automatically when they pass a retake or log back in. **Send reminder** (with email preview) per person, or **Send reminder to all**. The **"What is at-risk?"** button explains the rules.

Test results — the master attempts table

**Test results** is the master attempts table — every quiz attempt by **anyone**, including Department Leads or Admins who took a quiz themselves (not just employees):

- KPIs: total attempts, pass rate, average score, failed.
- Columns: employee, module, pool, **score**, status, **Attended** (checked-in vs not), date **with time**. Sort, filter (by module/pool/status), search by employee. Paginated. **Download CSV** exports the current view.
- Click a row to open the **attempt detail**: the score, correct/wrong counts, time taken, and a **question-by-question review** with the correct answers and the employee's choices. Actions: send reminder, schedule retake.

Per-module **Reports** (from the module page) add a score-distribution chart, most-missed questions, and the **roster — who attended & how they did**.

The audit log — filterable, sortable event history

**Audit log** records every event (sign-ins, quiz pass/fail, module published, reminders, resource changes, sessions, etc.). **Search** the message, **filter by event type**, **filter by person**, and **sort** newest/oldest. **Clear** resets filters. Paginated. The log is append-only.

## 9. Notifications & email templates

**COMMUNICATIONS**

### Notifications & email templates

Edit what BCJ Learn sends, when, and to whom. Variables in `{{double curly}}` are filled at send time.

**Email templates**

**How dynamic text works**

Anything inside double braces — like `{{name}}` — is automatically replaced with each person's real info when the email is sent. Just write your message normally and **click a variable below** to drop it in — you never have to type the braces yourself.

Example: "Hi `{{name}}`, your `{{module_title}}` seminar is on `{{seminar_date}}`." → "Hi Nancy, your Operations & Leadership seminar is on Jun 12."

CHOOSE AN EMAIL

- At-risk alert**
- Invitation
- Sign-in code
- Overdue reminder
- Password reset
- Quiz failed (retake)
- Quiz passed
- Seminar rescheduled
- Seminar scheduled
- Welcome

**Subject**

BCJ Learn — `{{employee_name}}` flagged at-risk

**Body**

# Hi `{{admin_name}}`,

`{{employee_name}}` (`{{cohort}}`) has been flagged as at-risk. Reason: `{{reason}}`.

[Review their profile](`{{profile_link}}`)

Click to insert: `+ {{admin_name}}` `+ {{employee_name}}` `+ {{cohort}}` `+ {{reason}}` `+ {{profile_link}}`

Save changes Preview Send test to me

**Recent sends**

- Invitation to Alex Boss about 8 hours ago
- Reminder: your upcoming module quiz is overdue to Furqan about 8 hours ago
- Reminder: Test quiz is overdue to Test Employee about 13 hours ago
- Reminder: Test quiz is overdue to Test Employee 1 day ago
- Reminder: your upcoming module quiz is overdue to Test Employee 5 days ago
- Reminder: your upcoming module quiz is overdue to Test Employee 5 days ago
- Reminder: your upcoming module quiz is overdue to Test Employee 5 days ago
- Reminder: your upcoming module quiz is overdue to Test Employee 5 days ago

Email templates & reminder rules

### Notifications :

- **Email templates** — edit the subject + markdown body of each automated email (invitation, password reset, welcome, quiz passed, quiz failed/retake, overdue reminder, at-risk alert, sign-in code, seminar scheduled/rescheduled). Insert **{{variables}}** like `{{name}}`, `{{module}}`, `{{score}}`, `{{date}}`, `{{link}}`. **Preview** the rendered email and **Send test** to yourself.
- **Reminder rules** — toggle **auto-reminders** and set the **overdue threshold** (days).

Anywhere you send a reminder (At-risk, People, a person's page), you first see an **email preview** and confirm before it sends.

## 10. Settings

### Branding ( Settings → Branding )

The screenshot displays the 'Branding & identity' settings page in the BCJ Learn admin interface. The left sidebar contains navigation links: Dashboard, People, Content, Reporting, Operations, Notifications, Audit log, Settings (selected), Certificate, and Help. The main content area is titled 'SETTINGS' and 'Branding & identity', with a subtitle 'Configure how BCJ Learn looks to managers and what name appears on emails.'.

The settings are organized into four sections:

- Platform name:** Includes a 'Displayed name' field set to 'BCJ Learn' and a note: 'Shows next to the sidebar logo across the app.'
- Brand colors:** Features 'Primary (navy)' with hex code #03293C and 'Accent (brand teal)' with hex code #12D7CD. A note states: 'Applies to the app in light mode (buttons, links, highlights). Use a dark primary so button text stays readable. Dark mode keeps its tuned palette.'
- Logo:** Includes a dashed box for the logo and a note: 'Current logo on file. Click to replace.'
- Email sender:** Includes a 'Sender address' field.

A 'Live preview' section on the right shows a preview of the employee dashboard with the BCJ Learn logo, a 'Welcome back' message, a 'Start studying' button, and a progress indicator (UP NEXT).

At the bottom left, it indicates 'You're viewing as admin'.

Branding settings

- **Platform name** (shown by the sidebar logo).
- **Brand colours** — primary (navy) + accent (teal), with a live preview.
- **Logo** — upload SVG/PNG/JPG/WebP.
- **Email sender** — the From address for all automated emails (must be on your verified sending domain).

## Certificate ( Settings → Certificate )

The certificate editor with live preview

Fully customise the completion certificate with a **live preview**:

- **Heading, intro line, completion line, footer.**
- **Organisation name**, optional **signatory name + title**.
- **Show logo** toggle (uses the branding logo).
- Placeholders `{{name}}`, `{{module}}`, `{{score}}`, `{{date}}` fill in per employee. Saved settings apply to every employee's certificate.

## 11. Seminars & deliveries

- **Schedule a seminar / redelivery** — pick a **date + time** and the attendees. Everyone who hasn't passed in the last 12 months is pre-checked, and you can **search the directory to add anyone else**; invites email in batches. A module can have **multiple deliveries** (1st, 2nd, ...); each attempt is tied to the delivery it happened in. **Rescheduling** the current delivery moves only that one; **scheduling a new delivery** creates the next one and archives the prior in **Past deliveries**.
- **Check-in** — opened by the Department Lead in the presenter; each session has a **fresh 4-digit code**. Attendance is recorded and shown on rosters and the attempted-vs-not column in reports.
- **Send the quiz to non-attendees** — quizzes open after the seminar; you can also send/open the quiz to selected people who didn't attend (talk to your team about policy).

## Admin tips & gotchas

- A module **must have an owner** (a Department Lead) and **published** status before employees see it.
- The AI reads content **after it's uploaded** — upload first, then generate questions.

- **Rejecting** a question is final; regenerate to get a new one. **Duplicate** → **retake** makes a reworded retake copy.
- Editing a resource with **re-acknowledgement** on **bumps its version** and asks everyone to sign again; the resource detail page shows the full history.
- **At-risk** flags are automatic (you can't set them by hand) and clear on their own.
- **Demo mode** (if enabled) shows "(demo)" toasts and doesn't send real emails.

*See the FAQ for quick answers.*
